For animal (ornamental fish)

Composition per g:

100 mg Kalzium, 20 mg Kalium, 56 mg Natrium, 20 mg Manganesum, 216 mg Chlorid, 82 mg Sulfat, 150 mg Hydrogencarbonat, Trace elements: Eisen, Zink, Mangan, Kobalt

Manufacturer:

Manaus-Aquarium, Rügnerstrasse 73, D-64319 Pfungstadt, Germany

Application:

DIPLORAL should be used for 4 – 6 weeks directly after successful treatment for intestinal parasites with the medication OCTOCIL (Manaus-Aquarium) on the fish affected.

DIPLORAL provides the fish with important minerals and trace elements. If they are not given essential minerals, illnesses caused by mineral deficiencies can easily arise such as the hole-in-the-head disease seen in cichlids and particularly discus fish, poor growth and deformities in the skeletons of juvenile fish (also missing gill covers in discus fish in ornamental fish breeding)

Dosage:

DIPLORAL should be added to the aquarium.

5g per week per 100 litres (5g is approx. one heaped teaspoon), add to the aquarium water (with very soft water up to 10g per 100 litres).

Special warnings

Keep out of the reach of children!

Do not use on animals intended for consumption.

Before using, please note that we provide the latest information on our product **DIPLORAL** and updated pack inserts for downloading on the internet site www.manaus-aquarium.de on the use of **DIPLORAL**.
