Pharmaceutical for animals: (Fresh water
ornamental fishes)

Pharmaceutical contractor:

solution of active pharmaceutical ingredients to
load water in aquariums.

Consistency of effective components mg pro ml:

7.7mg Kupfersulfat anhydrit, 2.6mg Ethacridin-
lactat, 0,37mg Acriflavin HCL, 0.1mg Methylrosa-
niliniumchlorid, 20µg Magnesiumsulfat heptahy-
drat

Pharmaceutical Entrepreneurs:

Manaus-Aquarium, Rügenerstrasse 73, D-64319
Pfungstadt / Germany.

Field of application: Very effectively
TRICHOSAL® combats bacterial dermal
infections and acromycosis of fishes, as well as
"Hauttrüber". Causative organisms are.

Symptoms:

Causative organisms listed below might be
symptoms for the disease mentioned above:

Bacteria: White spots around the mouth,
mouldered fins and dermal reddish ulcers.

Acromycosis: Pale, like a piece of cotton wool
looking formations on skin and clutch of the
fishes.

Hauttrüber: Velvety covering on the fish, very
small pale spots on the skin and on the fins.

Preventive measures:

Don't use **TRICHOSAL®** in combination with other
medicine. If your fishes were treated with other
medicine before, it is necessary to change the
water before treatment.

Pay attention to the quality of the water and
reduce the organic contamination by chemical
decomposition products by changing the water of
the aquarium.

Strongly polluted filters should be cleaned before
the therapy. Filter and diffusers for oxygen supply
should always stay in progress! Ultraviolet lamps
have to be switched off during the therapy.

Do not make use of active filter media (for
example active carbon, Phosphatentferner etc.) in
filters during treatment, to avoid interactions with
bonded interactive substances.

Remove the ion exchanger (for example for
removal of nitrate etc.) during the therapy with
TRICHOSAL®.

In case of complications stop the treatment with
TRICHOSAL® and change the water – as usual
when medicating ornamental fishes and inform
the producer.

To be on the safe side, please remove apple
snale and other special snales from the aquarium
before starting the therapy with **TRICHOSAL®**.

Dosing and application:

Use the measuring cup enclosed to the package to dose **TRICHOSAL**[®] and spread the medicine on the surface of the water.

1. Day 1ml in to 40 liter water
2. Day 1ml in to 40 liter water

In special aggressive kinds of parasites use:

3. and 5. day 1ml in to 40 Liter water.

Like all medicines should not be overdosed
TRICHOSAL[®].

Animals weakened by disease may be more sensitive.

Contraindication and adverse reactions:

TRICHOSAL[®] is a new product and well biocompatible.

Adverse reactions are not known.

Keepers of ornamental fishes should inform the veterinarian or pharmacist and the producer about any unknown adverse reaction.

Important warning:

Keep out of reach of children!

Don't make use of the medicine on animals that are kept to produce foodstuffs.

Keep it in the original package and defend it from light and heat.

Store it frost-protected.

Do not make use of it after the expiry date is exceeded.

TRICHOSAL[®] can contribute coloring.
